Subject: RE: West Lake Landfill - Surface drainage outlets and BMPs for runoff

Thursday October 28th would work best for me as I will already be at the landfill that week.

Subject: West Lake Landfill - Surface drainage outlets and BMPs for runoff

Brian/Paul,

As you are aware, outfalls are currently monitored for the Bridgeton Landfill NPDES discharge permit. However, it is not clear to EPA nor MDNR what outfalls receive or could potentially receive discharge from OU1 (areas 1 and 2) in the event of a significant precipitation event. It is also unclear what if any BMPs are presently in place to manage and prevent such discharges (i.e., berms, diversion structures, etc.). As they could already be sufficiently managed and not be an issue. EPA and MDNR would therefore like to schedule time with you to perform a site reconnaissance of the existing drainage outfalls and discuss BMPs. Please check your calendars for Thursday, October 29 or the following Tuesday-Thursday, November 3 -5 for a day that is open. I will coordinate with our counterparts at MDNR and office of solid waste, accordingly.

Regards,

Bradley Vann - Remedial Project Manager
